

Where the Conversion Leaks Are

nomadinternet.com · CRO Recommendations · August 2026

The single most valuable conversion mechanism on this site is the coverage-check CTA, which is the primary entry point for visitors to determine if the service is available at their address. This mechanism is bleeding value due to inconsistent CTA labels across the site, causing ambiguity and friction, and the site's severe performance issues (LCP of 50.8s) that cause most visitors to bounce before they can even interact with the CTA.

Prioritised findings

#	Finding	Severity	Effort	PXL
1	Lab LCP 50.8s mobile Lab Largest Contentful Paint of 50.8 seconds on mobile causes most visitors to bounce before seeing content.	Urgent	Medium	5/10
2	Conflicting coverage CTAs Multiple different CTA labels for the same coverage-check action create ambiguity about the next step.	High	Low	5/10
3	Headline omits unlimited promise The primary headline fails to mention the unlimited data benefit, leaving a key differentiator unstated above...	High	Low	5/10
4	Lab TBT 3500ms mobile Lab Total Blocking Time of 3,500 ms on mobile freezes the main thread, making the page unresponsive during...	High	Medium	5/10
5	Lab CLS 0.265 mobile Lab Cumulative Layout Shift of 0.265 on mobile causes layout jumps, leading to mis-taps on critical buttons.	High	Medium	5/10
6	Unlabeled form fields Form fields lack visible labels, so visitors cannot tell what information is required before submitting.	High	Low	4/10
7	Inconsistent price formatting The same plans display conflicting price formats and values across pages, undermining trust in cost clarity.	High	Low	4/10
8	Duplicate form submissions Two identical CONTINUE forms on the same page create competing submission points and confusion.	Medium	Medium	4/10

#	Finding	Severity	Effort	PXL
9	Value prop buried under questions The hero area leads with qualification questions instead of stating the product's value, delaying message...	Medium	Medium	4/10
10	Duplicate H1s dilute focus Multiple H1 headings on the same page fragment the primary message and weaken information scent.	Medium	Low	4/10

How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of A/B tests produce a significant win, and winners tend to overstate their true effect.
